

"Responsive, professional, goal orientated while keeping in the forefront that our shared finish line is to increase access to quality health and well-being for all children, adolescents, and their families."

- State Health Department

Expert Consulting Services

FOSTERING GRANTOR AND GRANTEE SUCCESS

FIDUCIARY MANAGEMENT, GRANT MANAGEMENT, TECHNICAL ASSISTANCE, AND TRAINING

Our purpose

The School-Based Health Alliance (SBHA) is the premier national technical assistance and training provider to the school-based health care field. We contribute to improving child and adolescent health via school-based health care by supporting and creating community and school partnerships. Our consulting team offers over 250 years of combined experience working with teams in planning, implementing, operating, evaluating, and improving community-provided school-based health care, including school-based health centers (SBHCs).

How can funding agencies support SBHCs?

Various types of agencies may have funds specific for the growth and development of SBHCs from county health departments, school districts, state agencies, or other entities. Whether the need is to disperse funds in a short time span or increase your engagement with SBHC services, we are able to work with entities to achieve their desired goal. The support of these granting agencies provides SBHCs with the funds to support services that may include outreach, primary care, equipment, mental/behavioral health, telehealth, mobile unit, dental health care, health promotion/education, and more.

Who are our clients?

Our list of over 75 clients includes local, state, national, and philanthropic entities, state health departments, state primary care associations, national non-governmental organizations, foundations, Health Centers, school districts, hospitals, emerging state affiliates, and more.

Our services

We collaborate with funders to design grants and requests for proposals related to school-based health care. Our fiduciary experience in contract management provides the needed support to lead the oversight of grant management, and our SBHC expertise allows us to equip grantees with the knowledge to support their work. We develop technical assistance and training plans to support grantee success while modifying our delivery and tools for the specific community.

Grant Facilitation

We collaborate with funders to design grants and requests for proposals/applications for school-based health care planning and implementation to provide coordinated, culturally sensitive, developmentally appropriate SBHC services. In addition, we facilitate technical assistance and training learning sessions with grantees, providing recipients with the support to achieve their goals. Funders can choose their level of involvement and oversight throughout the process. We look at specifications for the target demographics to meet the community's specific needs.

Technical Assistance and Training

We provide technical assistance and training using our proprietary school-based health care tools and resources. Based on best practices from the field, we help grantees with school-based health care planning, implementation, improvement, and expansion of existing services. We deliver in-person and virtual technical assistance and training on issues vital to our field through wide-reaching national delivery strategies, intensive learning collaboratives with small cohorts, and one-on-one consultation.

Grant Fiduciary Management

SBHA designs and administers grantee contracts, pays invoices, and monitors grantee reports and outcomes, ensuring funds are in accordance with contract specifications. We work to distribute funds efficiently and with the highest level of accountability to guarantee the support the progress of funds. Funders are kept abreast of progress and key milestones. At the same time, we communicate with grant recipients to ensure contracts are signed, reports are completed, and payments are received.

Landscape Analysis

We help your team understand the assets and needs in your community through geo-mapping, applying our knowledge of the conditions that allow SBHCs to flourish, site visits, and key informant interviews.

State Leadership Development

We provide coaching and technical assistance to state-level stakeholders interested in building coalitions and grassroots movements to support and strengthen school-based health care in their states, including those interested in developing state-affiliate school-based health alliances.
